

Campus Event Planner

Project Proposal

Xander Murphy & Joseph Gallucci

The Problem

College students often manage:

- Classes
- Assignments
- Club meetings
- Campus events
- Personal activities

Information can be spread across multiple apps and calendars.

Our goal: Put everything in one simple planner.

Proposed Solution

Campus Event Planner

A mobile app that lets students:

- Create and manage events
- Organize events by category
- View upcoming activities
- Search and filter events
- Track completed events

Designed to be **simple, fast, and easy to use.**

Intended Users

Primary Users

College & university students

Especially students who:

- Participate in clubs
- Have busy class schedules
- Attend campus events
- Want better organization

Major Features

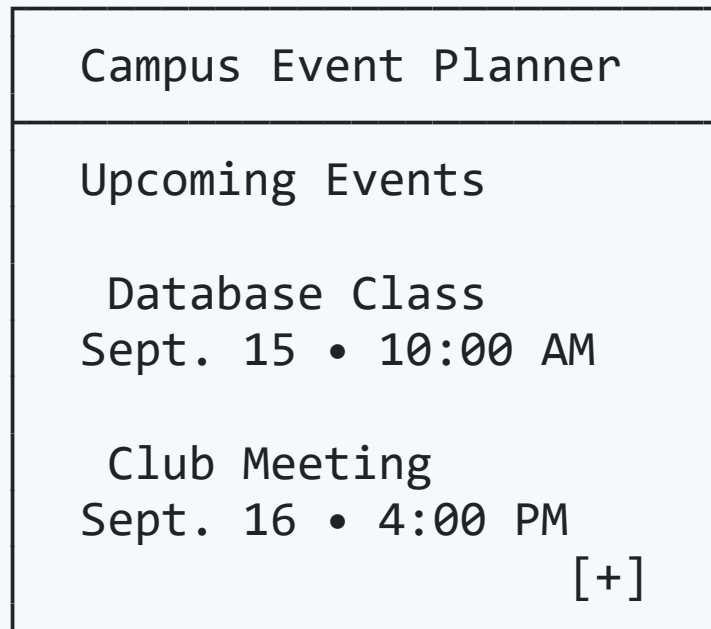

-  Calendar & Event List
-  Create Events
-  Edit & Delete Events
-  Search & Filter
-  Event Categories
-  Location & Description
-  Completed Events
-  Local Data Storage

Future

-  Event reminders & notifications

UI Design

Home Screen

Navigation:

Home | Calendar | Events | Settings

Technology

Development

- Flutter
- Dart
- Android Studio / VS Code

Collaboration

- Git & GitHub

Data

- Local storage
- No backend or external API required

Flutter & Dart

Flutter

Used for:

- User interface
- Navigation
- Forms
- Lists
- Calendar
- Buttons & interactions

Flutter & Dart

Dart

Used for:

- Application logic
- Event models
- Searching & filtering
- State management
- Data handling

Development Methodology & Testing

Process

- **Agile-style workflow** with weekly check-ins
- Work tracked using **GitHub Issues / Projects board**
- Feature work done in branches, merged via **pull requests**
- Short, frequent commits over long ones

Testing Strategy

- **Manual testing** of each feature as it's built (CRUD, search, filters)
- Basic **unit tests** for event model logic (add/edit/delete/search)
- Device testing on Android emulator + potentially one physical device

Risks & Technical Challenges

Risk	Mitigation
Search/filter performance with large event lists	Test early with sample datasets; optimize queries
UI complexity across multiple screens	Build core screens first, polish later
Limited Flutter/Dart experience	Allocate early weeks to tutorials & small prototypes
Merge conflicts with 2 developers	Clear branch naming, small frequent PRs, regular syncs

Team Responsibilities

Xander Murphy

- UI/UX design & navigation
- Calendar & event list screens
- Event creation/edit forms

Joseph Gallucci

- Event data model
- Local storage implementation
- Search & filtering logic

Development Plan

1. Plan — *Weeks 1–2*

Requirements, UI design, GitHub setup

2. Build — *Weeks 3–5*

Screens, navigation, event model

3. Features — *Weeks 6–9*

CRUD, categories, search & filtering

Development Plan (continued)

4. Storage — *Weeks 10–11*

Implement local data storage

5. Test — *Weeks 12–13*

Bug fixes, UI polish, Android testing

6. Finalize — *Weeks 14–15*

Documentation & presentation

Project Goal

One simple place for students to manage their campus life.

Campus Event Planner

Flutter • Dart • Android • Simple • Organized
